

6,800 GPD

SEAWATER REVERSE OSMOSIS SYSTEMS

Built to fit an existing installation area, this system is designed in modules so that it can pass through the ships munitions hatch, saving the cost of a hull cut. The shown configuration is two (2) 6,800 gpd sea water reverse osmosis units, consisting of one (1) pretreatment skid, one (1) HP skid, one (1) reverse osmosis skid, and one (1) power and control panel skid (not shown).
