

TACTICAL WATER PURIFICATION SYSTEM

TWPS

INNOVATIVE TECHNOLOGY

Increased capacity, reduced footprint water purification system designed to produce potable water from a broad range of water sources.

Aqua-Chem's Tactical Water Purification System (TWPS) provides a rapidly deployable water purification system capable of producing at least 1500 gallons of potable water from a fresh water source and 1200 GPH from a seawater source.

DESIGN FEATURES

- 3 person, 2 hr set-up / 2hr pack-up
- Requires Minimal Operator Attention
- -25°F to 120°F
- 600 to 800 hours of microfilter service between cleanings
- Design for 20 year life
- Reduces source turbidity as high as 500 NTU to less than 0.2 NTU
