Brackish Water Reverse Osmosis (RO) Membranes

Anti Fouling, Superior Rejection, High Flow, High Durability Equipped with fouling tolerant low dP spacer technology

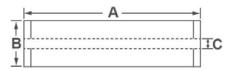

OVERVIEW

LG Chem's NanoH₂O[™] brackish water RO membranes serve various municipal and industrial applications and have been operating in the major utilities around the world. Incorporating innovative Thin Film Nanocomposite (TFN) technology, all LG BWRO membranes provide superior performance along with intrinsic anti-fouling property and are suitable for applications where consistent and reliable performance is a must.

LG BW 400 R G2 membranes offer a combination of enhanced fouling resistance, high rejection, flow, durability and reduce total cost of ownership: suitable for high salinity brackish water and wastewater reuse applications with a challenging feed water. LG BW 400 R G2 membranes incorporate state of art feed spacer technology, which can greatly reduce differential pressure and cleaning frequency.
