

# Acid Cleaning

## Contact Us To Schedule Your Cleaning

- **Longer Equipment LifeCycle**- The right solution with no surface damage to equipment.
- **Easier on People & Environment**- Our processes and chemicals make environmental compliance easier and keep your crew safe from toxins.
- **Better Results**- Our specially design chemicals, processes and technicians lead to better outcomes and results.

## Common Scales

- Calcium Carbonate
- Calcium Sulfate
- Magnesium Hydroxide
- Calcium and Magnesium Silicate

## If your capacity is at or below 90%- it's time to clean your equipment.

These scales can form in alternating layers, which necessitates alternating treatments to eliminate the scale and restore the equipment to peak operating efficiency. Aqua-Chem technicians perform a scale sample and analyze it prior to cleaning. This way, we get the most efficient use of chemicals and processes to eliminate the scale and restore your equipment's performance.
